Workflows in Zoho Creator

1. Aim

To study the workflows used in the RentEase application, namely the eight form workflows and the two functions they and the dashboard call, and to verify how each one automates a step of the rental process.

2. Introduction

2.1 Workflows in Zoho Creator

A workflow is a set of actions that Zoho Creator runs automatically when an event happens. It replaces a manual step such as copying a value, changing a status or sending an email. A form workflow is attached to a form. It is defined by the record event (Created, Edited, Created or Edited, Deleted) and the form event, for example On success, On user input of a field or On validate. The actions are performed with workflow builder blocks or with Deluge scripts. A function is a reusable Deluge script that can be called from a workflow, a button or a schedule.

2.2 Workflows in RentEase

RentEase uses workflows so that the manager does not repeat work. The rent is filled from the unit and the lease, the lease reference is generated, a unit becomes occupied when a lease is created, a payment marks its invoice as paid and sends a receipt, the deposit refund is calculated, and the manager is notified of every new maintenance request. Other workflow types of RentEase (blueprint, schedules and approvals) are reported in separate experiments.

3. Objectives of the Study

- To understand the record event and the form event of a form workflow.
- To automate the filling of fields, the setting of statuses and the sending of emails in RentEase.
- To use a function from a workflow and from a dashboard button.
- To verify the result of each workflow with the existing records in Access mode.

4. Procedure

1. Open the RentEase application in Edit mode and click Workflow in the top bar.
2. Open Form workflows and view the eight workflows of the application.
3. For each workflow, note the form, the record event, the form event and the actions used.
4. Open the Deluge script or the action blocks of the workflow and read what it does. The workflows are only viewed and are not changed.
5. Open Functions and view generateReceipt(invoiceId) and sendRentReminders.
6. Open the application in Access mode and look at the existing records that show the result of the workflows.
7. Take a screenshot of each workflow and of its result.

5. Detailed Analysis of the Workflows

Table 1 lists the form workflows of RentEase and the action of each.

No.	Workflow	Form	Trigger	Action
1	Fill_Rent_From_Unit	Lease_Agreement	On user input of Unit	Fills the monthly rent from the selected unit
2	Set_Lease_Reference	Lease_Agreement	On create, on success	Sets Lease_Reference as LEASE-2026-n from the Lease No
3	On_Lease_Created	Lease_Agreement	On create, on success	Sets the unit to Occupied and sends the welcome email
4	Fill_Rent_From_Lease	Rent_Invoice	On user input of Lease_Agreement	Fills the rent amount from the selected lease
5	Fill_Amount_From_Invoice	Rent_Payment	On user input of Rent_Invoice	Fills the amount from the selected invoice
6	On_Payment_Mark_Paid	Rent_Payment	On create, on success	Sets the invoice to Paid and calls generateReceipt
7	Calculate_Refund	Move_Out_Request	On user input / on success	Calculates the deposit refund amount
8	Notify_Manager_On_Request	Maintenance_Request	On create, on success	Emails the manager about the new request

Table 1: Form workflows in RentEase

Table 2 lists the functions used in the application.

Function	Parameter	Called from	Action
generateReceipt	invoiceId	On_Payment_Mark_Paid workflow	Emails a receipt for the paid invoice
sendRentReminders	None	Send Rent Reminders button on the Command Center	Emails tenants who have unpaid invoices

Table 2: Functions in RentEase

Table 3 places these workflows among the workflow types of Zoho Creator.

Workflow type	Runs when	Used in RentEase
Form workflow	A record event happens in a form	Yes, this experiment
Blueprint	A record moves through a defined process	Yes, Experiment 9
Schedule	A set date and time arrives	Yes, Experiment 10
Approval	A record is sent for approval	Yes, Experiment 12
Batch workflow	A script must run on many records at once	Not used
Report workflow	A user acts on records in a report	Not used

Table 3: Workflow types in Zoho Creator

6. Output

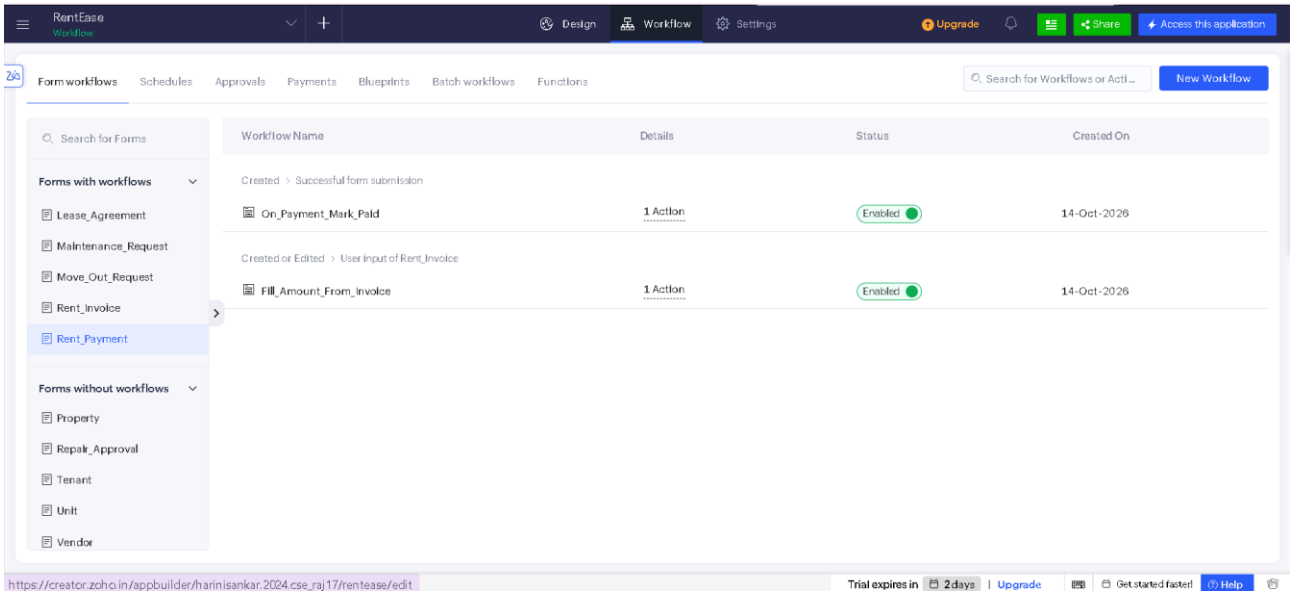

Figure 1: List of form workflows in RentEase

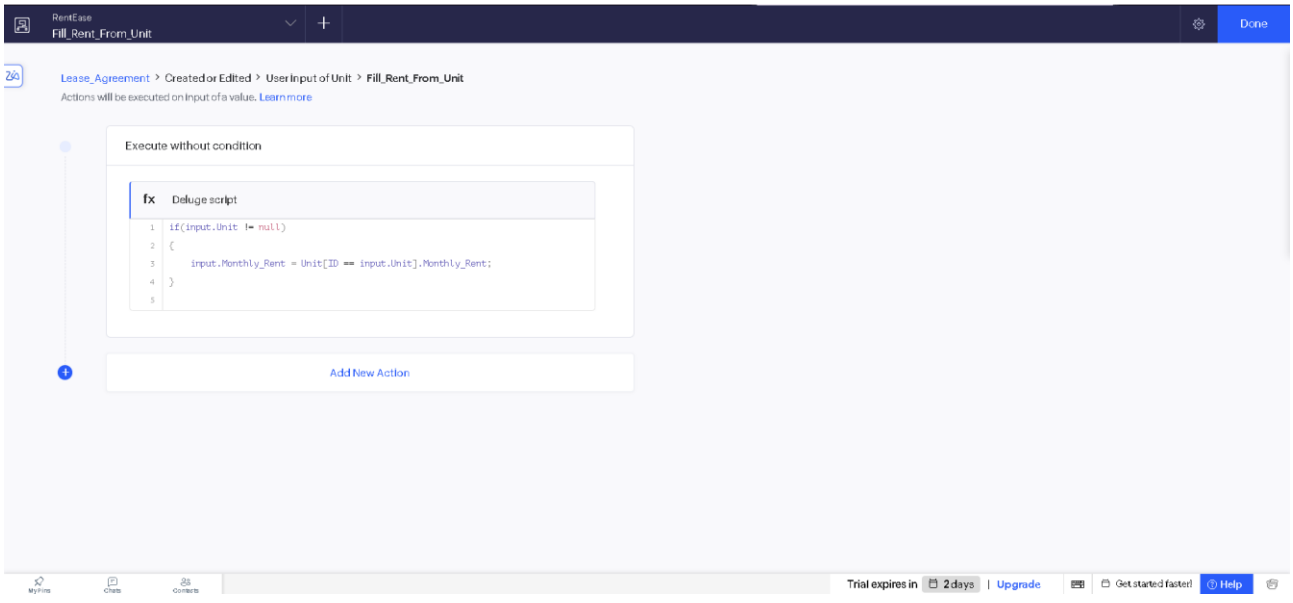

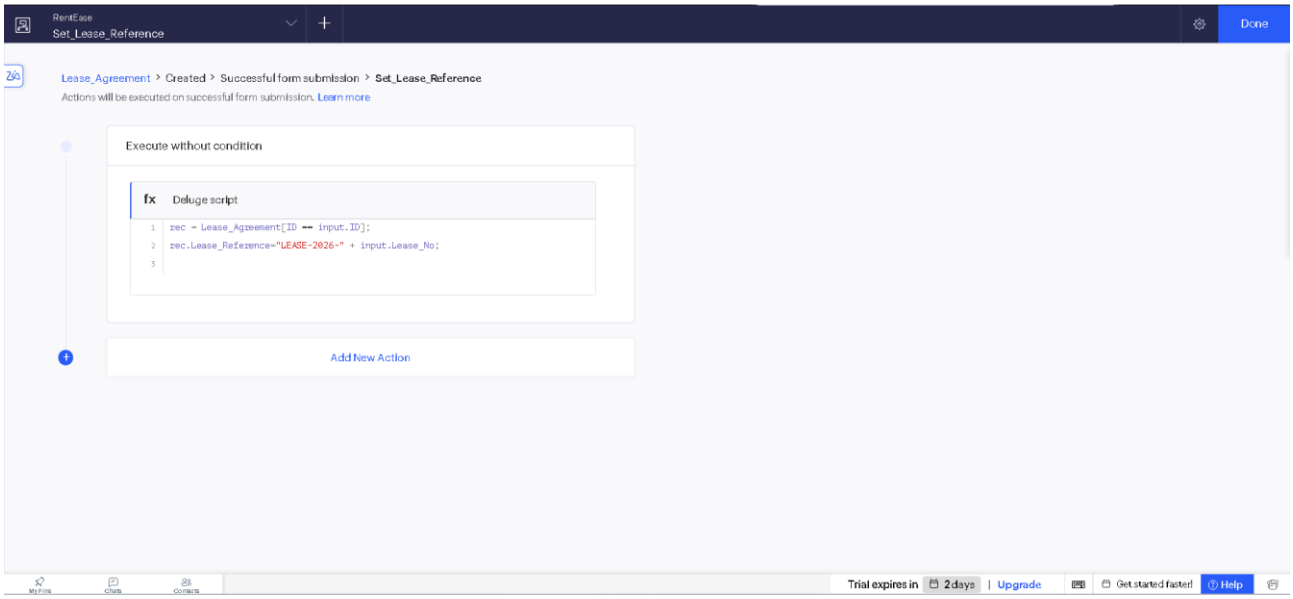

Figure 2: Fill_Rent_From_Unit workflow

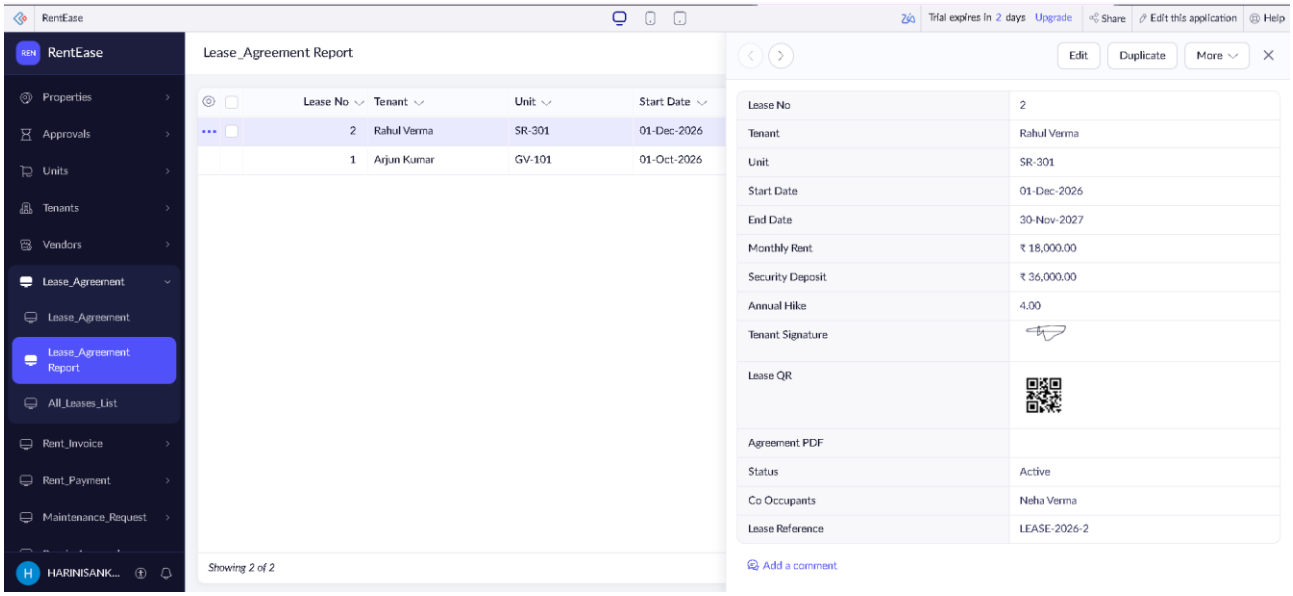

Figure 3: Set_Lease_Reference workflow and its result

Figure 4: On_Lease_Created workflow

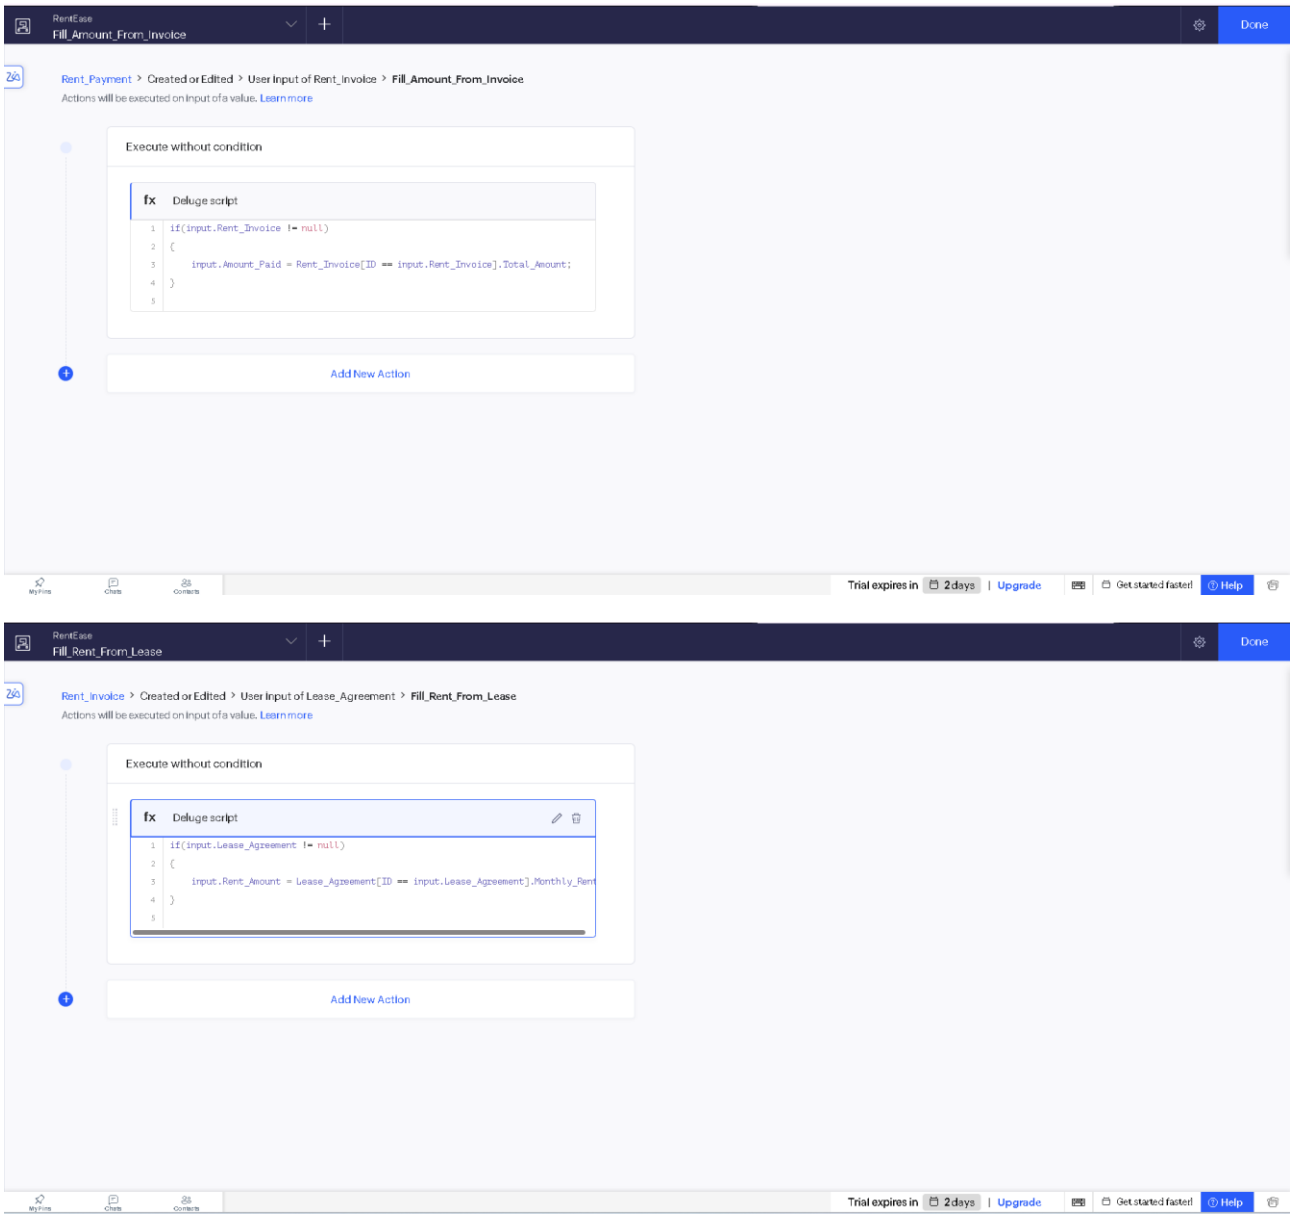

Figure 5: Fill_Rent_From_Lease and Fill_Amount_From_Invoice workflows

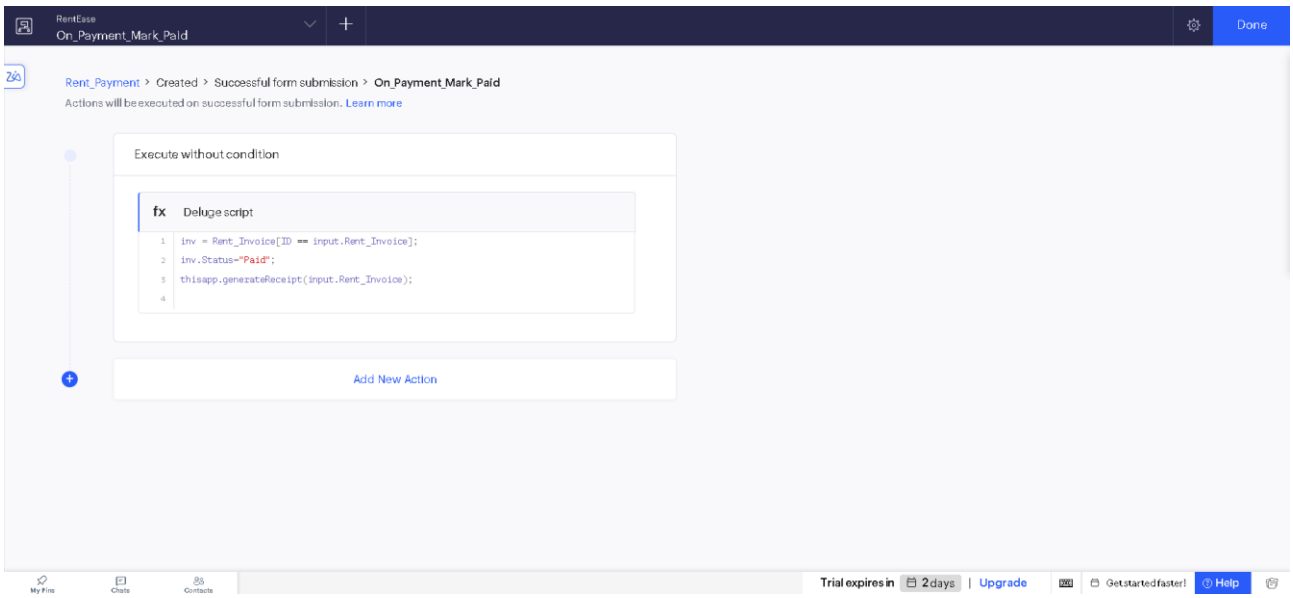

Figure 6: On_Payment_Mark_Paid workflow

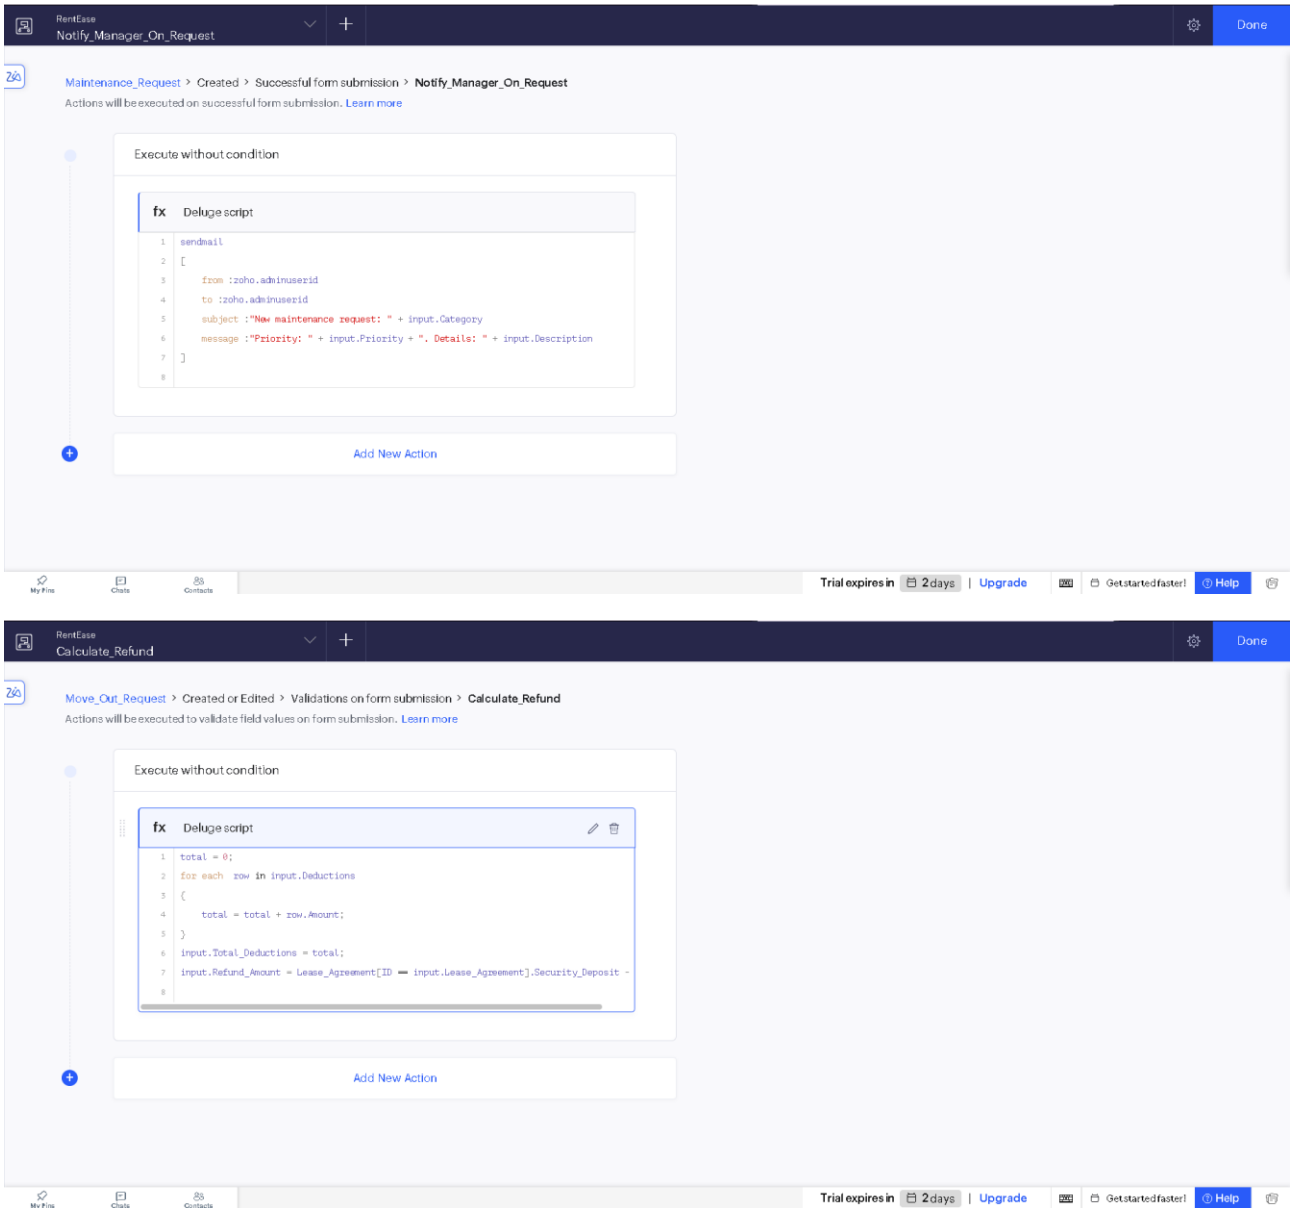

Figure 7: Calculate_Refund and Notify_Manager_On_Request workflows

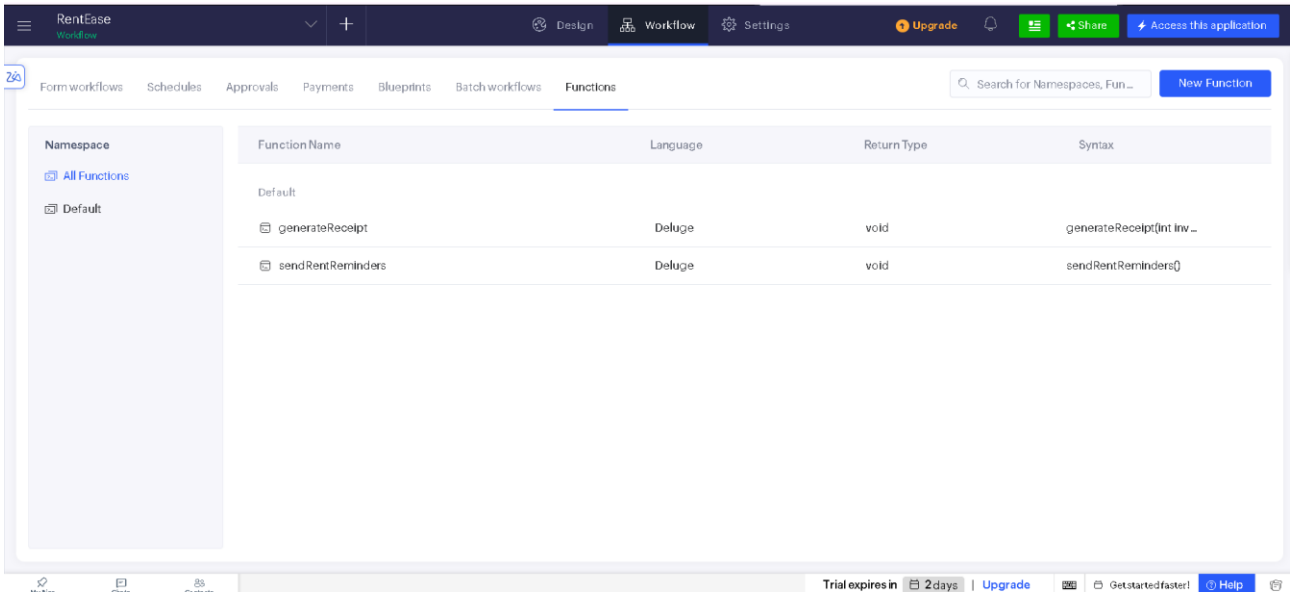

Figure 8: Functions of RentEase

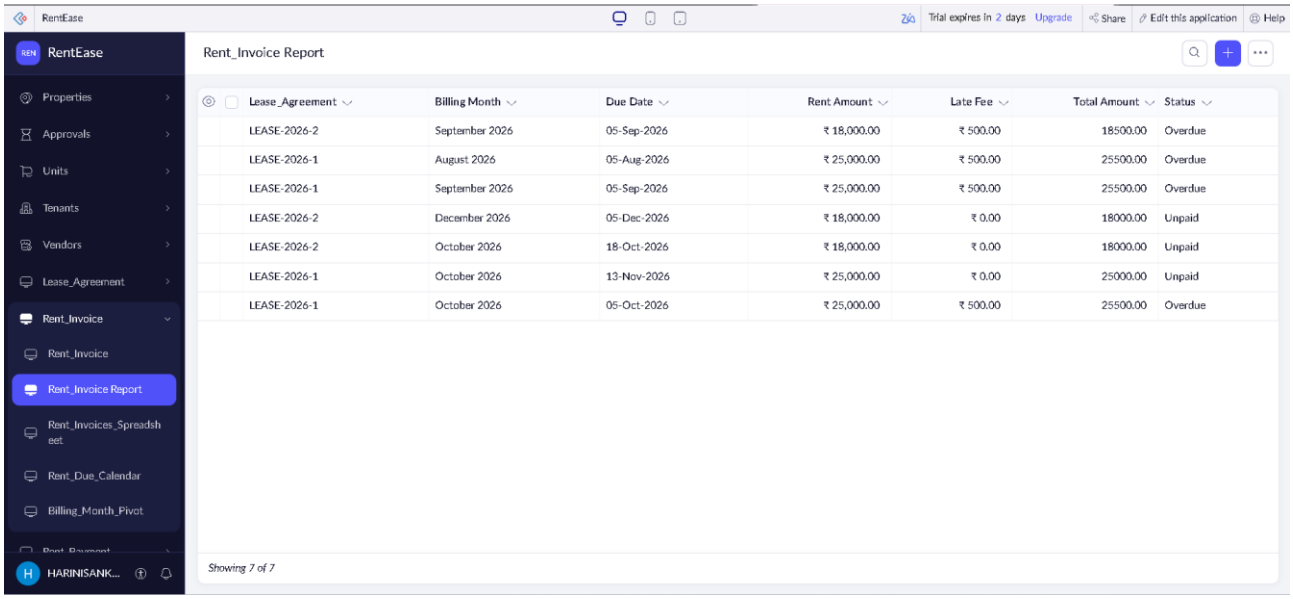

Figure 9: Invoice records updated by the workflows

7. Result

The eight form workflows and two functions of RentEase were studied and checked against the existing records. The workflows fill the rent and amount fields, generate the lease reference, mark units occupied and invoices paid, calculate the deposit refund and notify the manager, and the functions send the receipts and rent reminders. Together they remove the repeated manual steps from the rental process.
