Building Reports in Zoho Creator

1. Aim

To build the nine report types available in Zoho Creator (List, Spreadsheet, Kanban, Calendar, Map, Timeline, Pivot, Chart and Summary) on the forms of the RentEase application, so that the manager, the owner and the tenant can each view the rental data in the format that suits their decisions.

2. Introduction

2.1 Reports in Zoho Creator

A report is a view of the records stored by a form. A form only collects data; a report decides how that data is displayed, filtered, grouped, edited and exported. Zoho Creator provides nine report types: List, Spreadsheet, Kanban, Calendar, Map, Timeline, Pivot Table, Chart and Summary. Each type answers a different question, so choosing the right type matters more than showing every record in one default list.

2.2 Reports in RentEase

In RentEase, the manager needs to know which rent is unpaid and which repairs are stuck, the owner needs income by property, and the tenant needs to see his own lease and invoices. Nine reports were built on the existing forms, one for each report type, each tied to one of these needs.

3. Objectives of the Study

- To create one report of every type supported by Zoho Creator.
- To choose the form, columns, grouping and sorting that suit each report type.
- To match each report type to a real decision in the rental business.
- To verify every report with sample data in Access mode.

4. Procedure

1. Open the RentEase application in Edit mode and click the + (Create New Component) button, then choose Report.
2. Choose the base form and the report type from the report type selector.
3. Give the report a name using underscores, for example Maintenance_Status_Kanban.
4. Configure the report: columns and sorting for List, editable columns for Spreadsheet, the grouping field for Kanban, the date field for Calendar and Timeline, the address field for Map, rows and values for Pivot, axes for Chart, and the group-by field for Summary.
5. Save the report and open it in Access mode.
6. Add or use the sample records and check that each report displays them correctly.
7. Take a screenshot of each report, and of the report type selector where required.

5. Detailed Analysis of the Reports

Table 1 lists the nine reports, the form each one is built on and the configuration used.

Type	Report name	Base form	Configuration
List	All_Leases_List	Lease_Agreement	Columns: Lease No, Tenant, Unit, Start Date, End Date, Monthly Rent, Status; sorted by Start Date
Spreadsheet	Rent_Invoices_Spreadsheet	Rent_Invoice	Grid view with the Status column editable for bulk updates
Kanban	Maintenance_Status_Kanban	Maintenance_Request	Cards grouped by Status (Raised to Closed); card shows Category and Unit
Calendar	Rent_Due_Calendar	Rent_Invoice	Date field: Due Date; each day shows the invoices due
Map	Property_Location_Map	Property	Pins placed from the Property Address field
Timeline	Rent_Payment_Timeline	Rent_Payment	Payments arranged along the Paid On date
Pivot	Billing_Month_Pivot	Rent_Invoice	Rows: Billing Month; value: sum of Total Amount
Chart	Revenue_By_Property_Chart	Rent_Invoice	Bar chart of rent amount by property or billing month
Summary	Property_Wise_Summary	Rent_Invoice	Grouped by property; count of invoices and sum of Total Amount

Table 1: Reports created in the RentEase application

Table 2 shows why each report type was chosen.

Type	Used by	Business question answered
List	Manager	Which leases exist and when do they start and end?
Spreadsheet	Manager	Can invoice status be updated for many records quickly?
Kanban	Manager	Which repair requests are at which stage?
Calendar	Manager, tenant	Which rents fall due on which days?
Map	Manager, owner	Where are the properties located?
Timeline	Manager	When were payments received?
Pivot	Owner	How much rent is billed each month?
Chart	Owner	Which property or month brings the most revenue?
Summary	Owner	What are the totals for each property?

Table 2: Purpose of each report type

6. Output

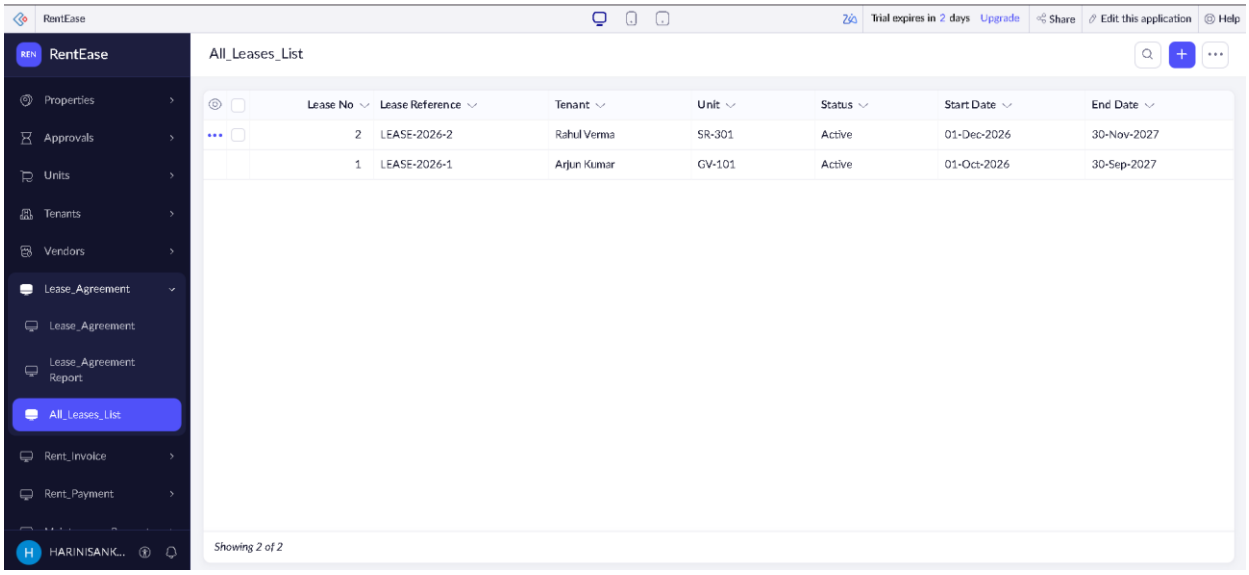

Figure 1: List report (All_Leases_List)

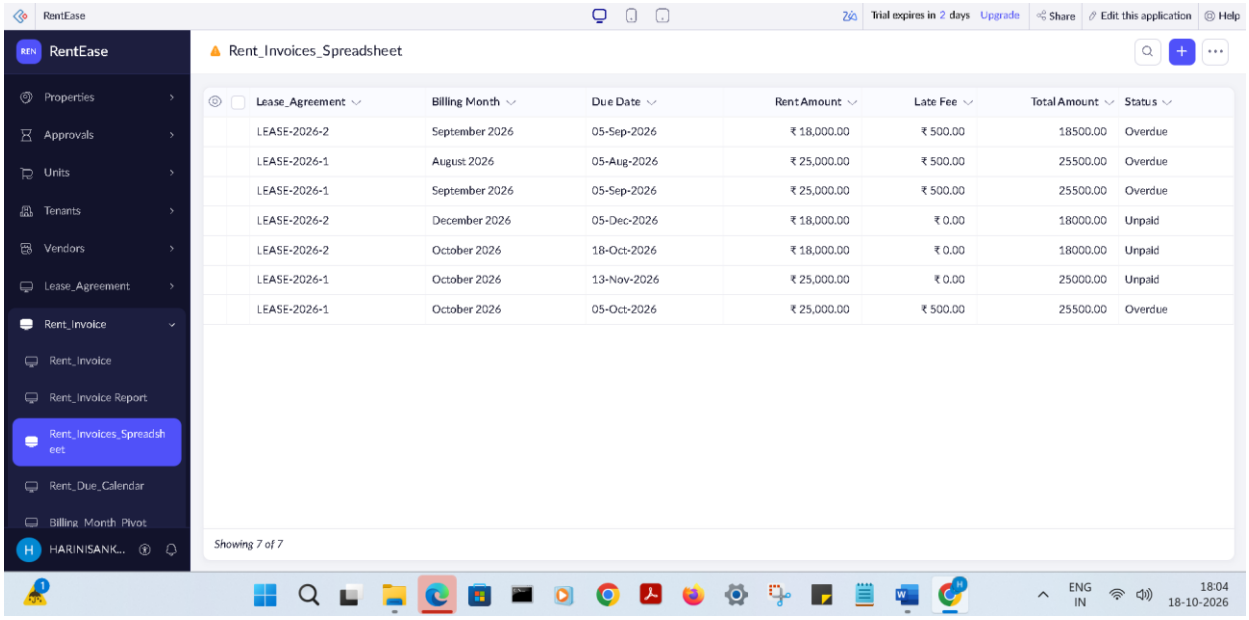

Figure 2: Spreadsheet report (Rent_Invoices_Spreadsheet)

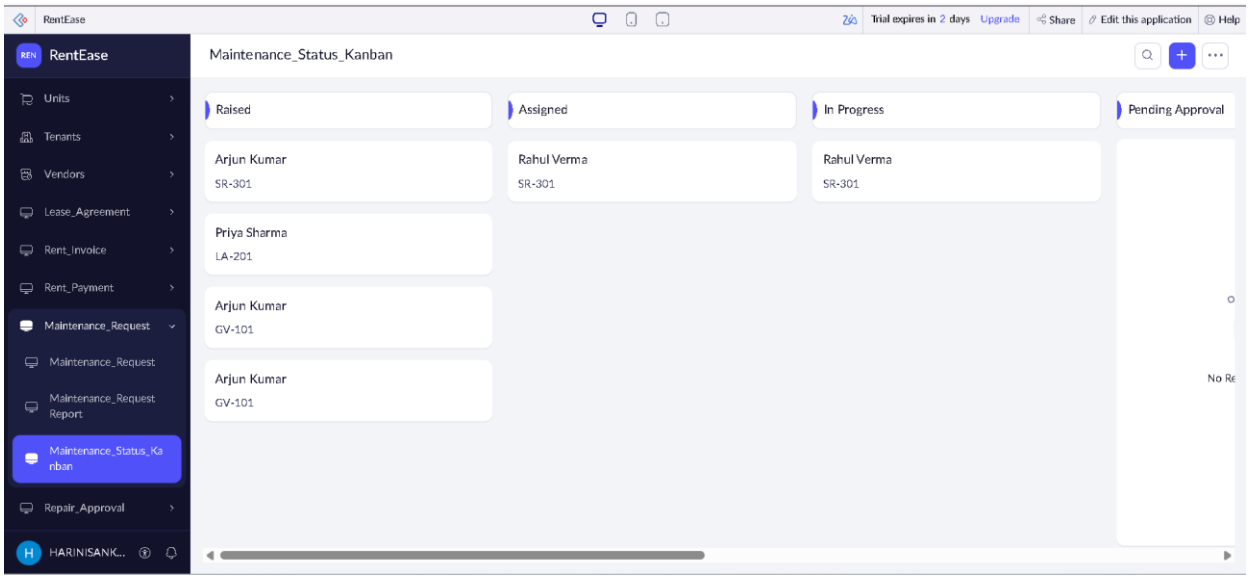

Figure 3: Kanban report (Maintenance_Status_Kanban)

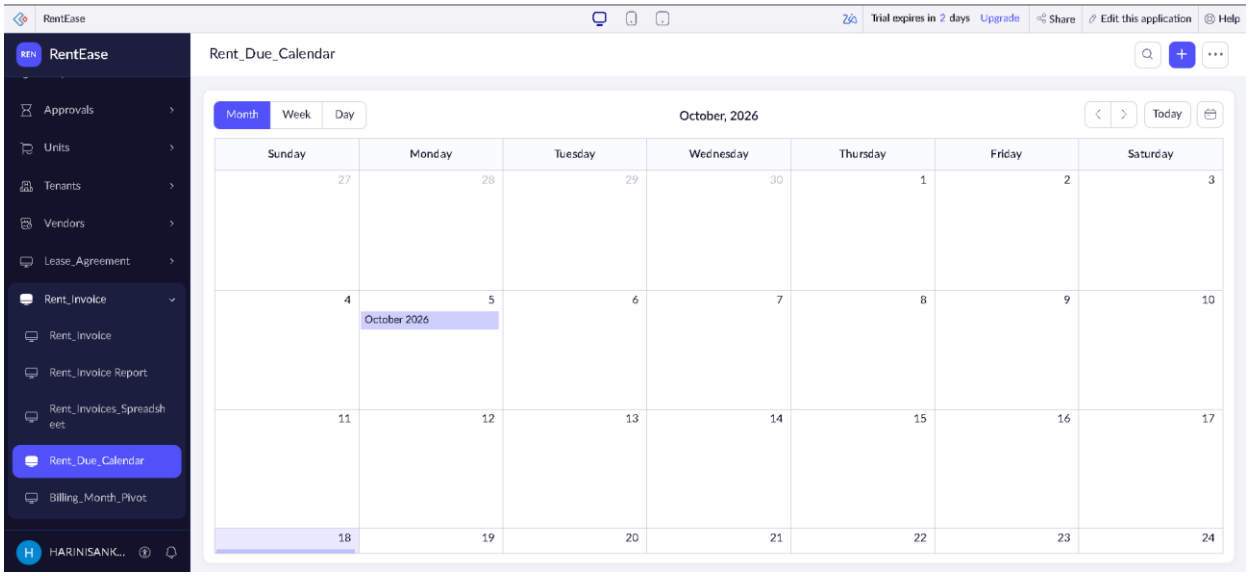

Figure 4: Calendar report (Rent_Due_Calendar)

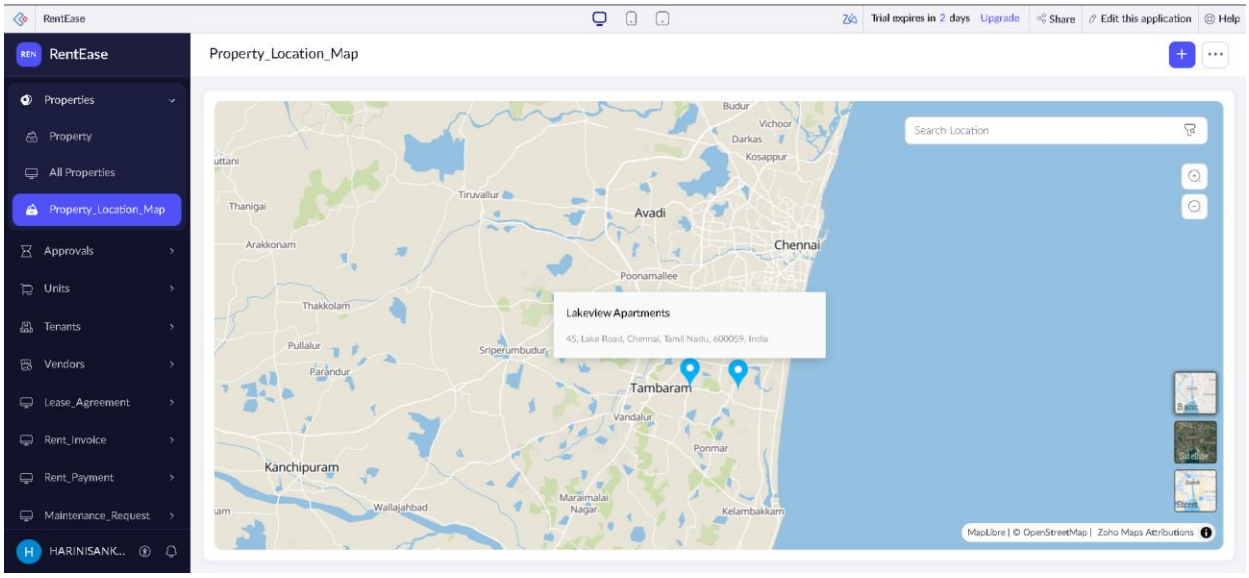

Figure 5: Map report (Property_Location_Map)

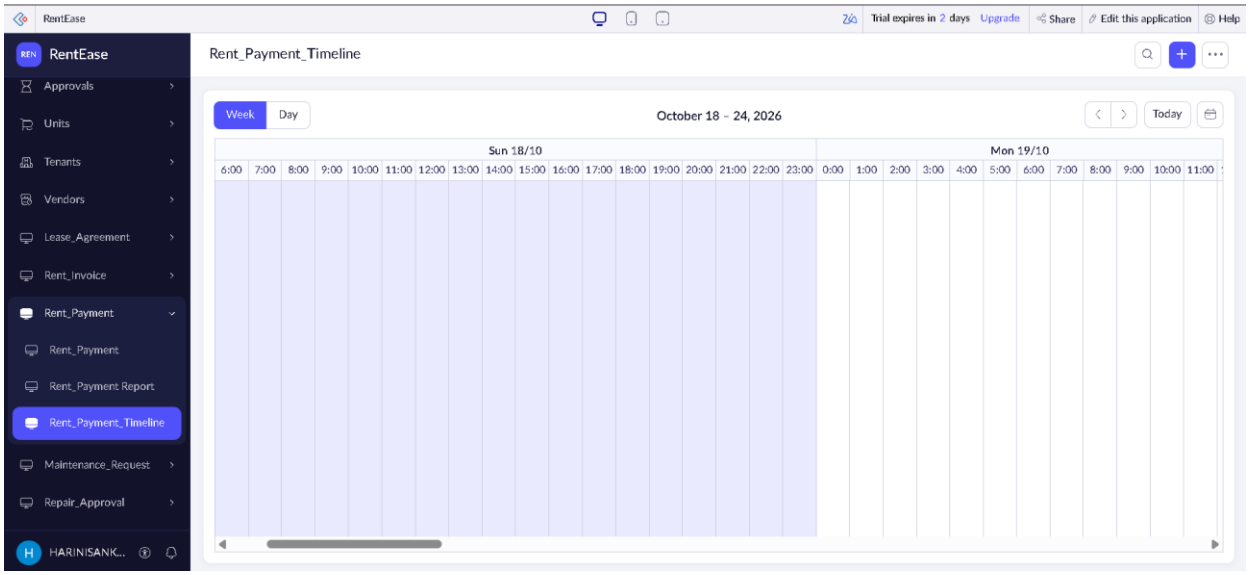

Figure 6: Timeline report (Rent_Payment_Timeline)

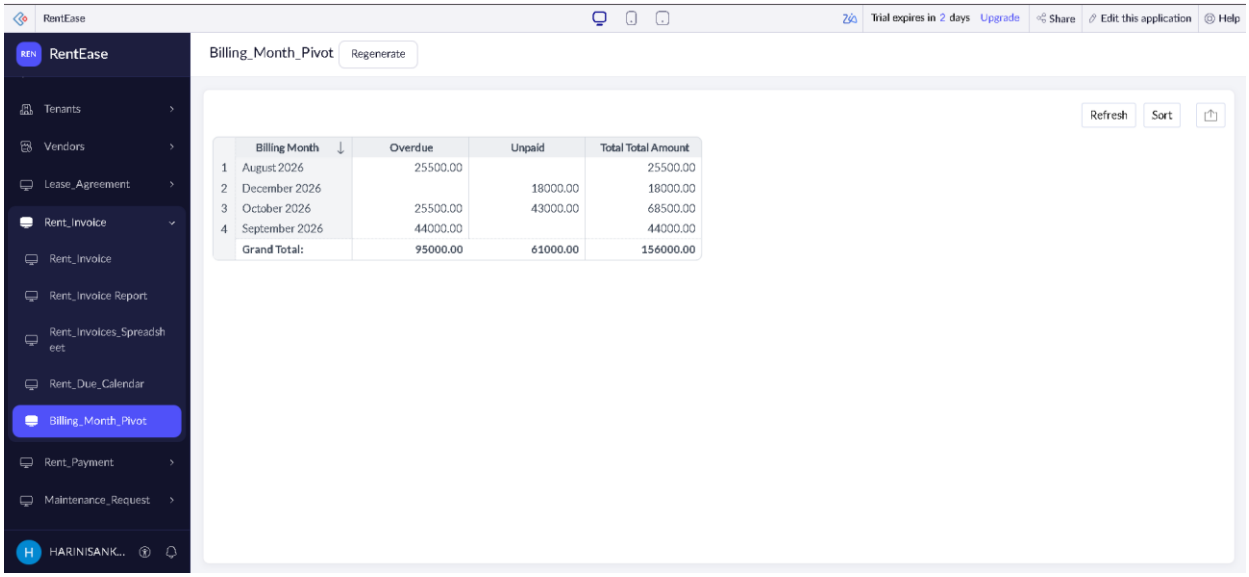

Figure 7: Pivot report (Billing_Month_Pivot)

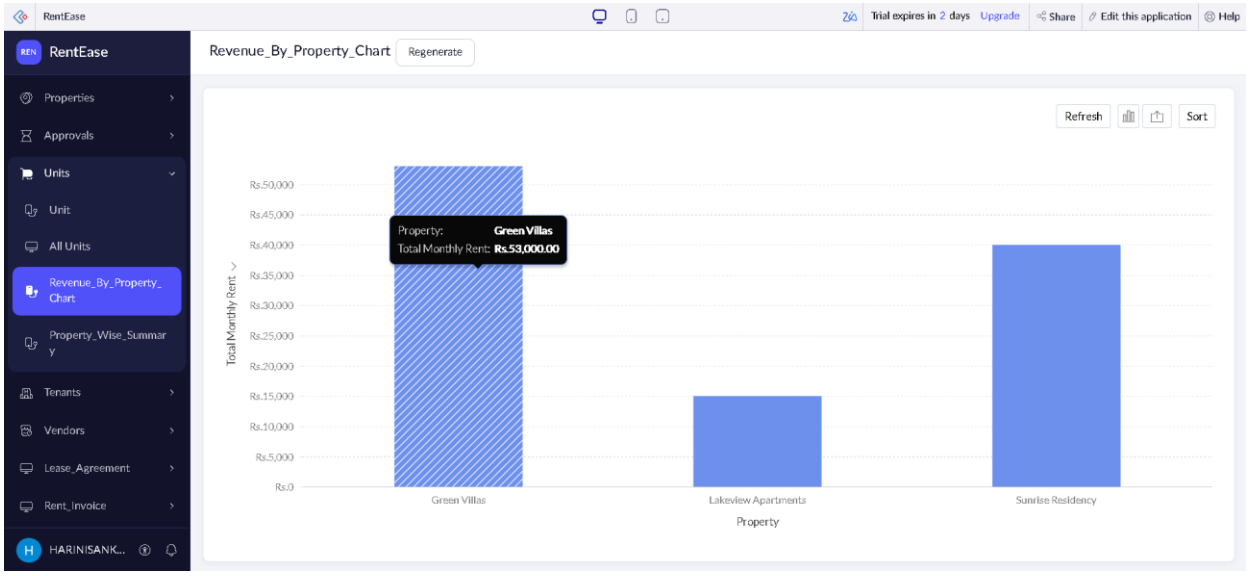

Figure 8: Chart report (Revenue_By_Property_Chart)

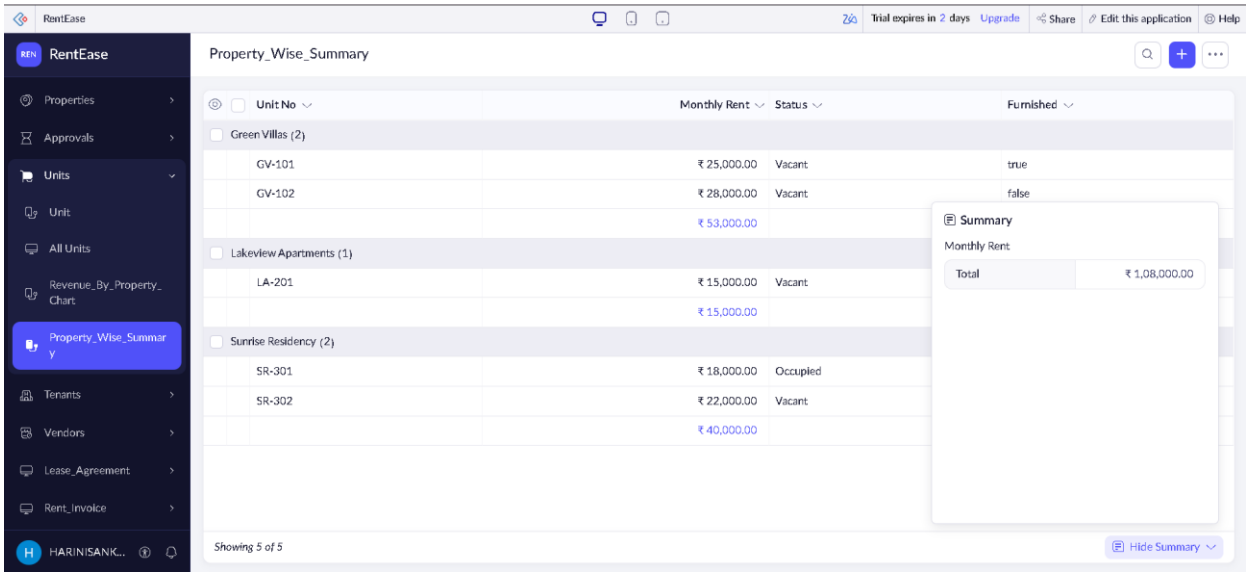

Figure 9: Summary report (Property_Wise_Summary)

7. Result

Nine reports, one for each report type in Zoho Creator, were built on the RentEase forms and verified with sample data in Access mode. Each report presents the same rental data in the format that best suits its user: lists and spreadsheets for daily record handling, Kanban and calendar views for operations, a map and timeline for location and history, and pivot, chart and summary views for the owner's analysis.
