Form Creation in Zoho Creator

1. Aim

To design and build the data-entry forms of the RentEase application in Zoho Creator using the Form Builder, applying suitable field types, lookups, validations and layout so that all rental information is captured in a structured manner.

2. Introduction

2.1 Forms in Zoho Creator

A form is the basic building block of a Zoho Creator application. Each form defines a database table: every field becomes a column and every submission becomes a record. The Form Builder offers drag-and-drop Basic Fields (Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Time, Drop Down, Radio, Multi Select, Checkbox), Advanced Fields (Decision Box, Rich Text, URL, Image, Percent, Currency, Decimal, Date-Time, SubForm, Lookup, Signature, File Upload, Audio, Video, Auto Number, Formula, QR/Barcode), Special Fields and AI Fields.

2.2 The RentEase Application

RentEase is a low-code system for a small property manager who handles rent and repairs through spreadsheets and messages. It serves three users: the manager, who tracks occupancy, rent and repairs; the tenant, who views the lease and raises maintenance requests; and the owner, who approves large repair costs and deposit refunds. All of these start with well-designed forms.

3. Objectives of the Study

- To create ten related forms for the RentEase application.
- To choose the correct field type for each piece of data.
- To connect forms using Lookup fields so that data is selected, not retyped.
- To apply field settings such as mandatory fields, initial values and duplicate prevention.
- To organise a long form into logical sections.

4. Procedure

1. Sign in to Zoho Creator, click Create Application, choose Create from scratch, and name it RentEase (time zone Asia/Kolkata, date format dd-MMM-yyyy).
2. Click Create a new form, name it, and drag the required fields from the palette onto the form.
3. Click each field and set its field name and properties (Mandatory, Initial value, No duplicate values).
4. For Lookup fields, choose the parent form, the display field and the Drop Down display format.
5. For SubForm fields, define the repeating columns, for example Name, Relation and Age.
6. For long forms, drag Section fields in to group related fields.
7. Save each form, open the application in Access mode and add sample records.
8. Create the forms in dependency order: Property, Unit, Tenant, Vendor, Lease_Agreement, Rent_Invoice, Rent_Payment, Maintenance_Request, Repair_Approval, Move_Out_Request.

5. Detailed Analysis of the Forms

Table 1 lists the ten forms created, with their purpose and key fields.

No.	Form	Purpose	Key fields
1	Property	Master list of buildings	Property Name, Property Address, Property Type, Total Units, Property Photo, Owner Name, Owner Email
2	Unit	Rentable flats and shops	Property (Lookup), Unit No, Monthly Rent, Status, Amenities, Furnished
3	Tenant	Tenant details and portal login	Tenant Name, Email, Phone, Permanent Address, Occupation, ID Proof, Tenant Photo
4	Vendor	Plumbers, electricians and other service providers	Vendor Name, Phone, Service Type, Rating, Documents
5	Lease_Agreement	Rental agreement between tenant and unit	Lease No (Auto Number), Tenant and Unit (Lookups), dates, Monthly Rent, Security Deposit, Annual Hike, Co Occupants (SubForm), Tenant Signature, Lease QR, Agreement PDF, Status
6	Rent_Invoice	Monthly rent bill	Lease (Lookup), Billing Month, Due Date, Rent Amount, Late Fee, Total Amount (Formula), Status
7	Rent_Payment	Payment against an invoice	Invoice (Lookup), Paid On, Amount Paid, Mode, Transaction Ref, Receipt
8	Maintenance_Request	Repair complaints from tenants	Tenant, Unit, Vendor (Lookups), Category, Description, Issue Photo, Issue Video, Priority, Estimated Cost, Status
9	Repair_Approval	Owner approval of repair quotes	Request, Vendor (Lookups), Quoted Amount, Justification, Quote File, Approval Status
10	Move_Out_Request	Move-out and deposit refund	Lease (Lookup), Move Out Date, Reason, Inspection Photos, Deductions (SubForm), Total Deductions, Refund Amount, Status

Table 1: Forms created in the RentEase application

Table 2 shows the field types used across the forms.

Category	Field types used
Basic fields	Name, Email, Address, Phone, Single Line, Multi Line, Number, Date, Drop Down, Radio, Multi Select
Advanced fields	Decision Box, Image, Currency, Percent, Decimal, Date-Time, SubForm, Lookup, Signature, File Upload, Video, Auto Number, Formula, QR/Barcode
Special fields	Section (groups the Lease_Agreement form)

Table 2: Field types used in RentEase

Table 3 shows the field settings applied.

Setting	Where it is applied
Mandatory	Property Name, Owner Email, Tenant Name, Email, Phone, Unit No, Monthly Rent, Start and End Date, Tenant Signature, lookups on child forms
No duplicate values	Tenant Email, because it is the portal login
Initial value	Unit Status = Vacant, Lease Status = Draft, Invoice Status = Unpaid, Priority = Medium, Late Fee = 0
Lookup (Drop Down display)	Unit to Property, Lease to Tenant and Unit, Invoice to Lease, Payment to Invoice, Request to Tenant, Unit and Vendor
Auto Number	Lease No, a unique running number for each lease
Formula	Total Amount = Rent Amount + Late Fee
QR/Barcode	Lease QR, generated from Lease No
SubForm	Co Occupants (Name, Relation, Age) and Deductions (Item, Amount)

Table 3: Field settings applied

6. Output

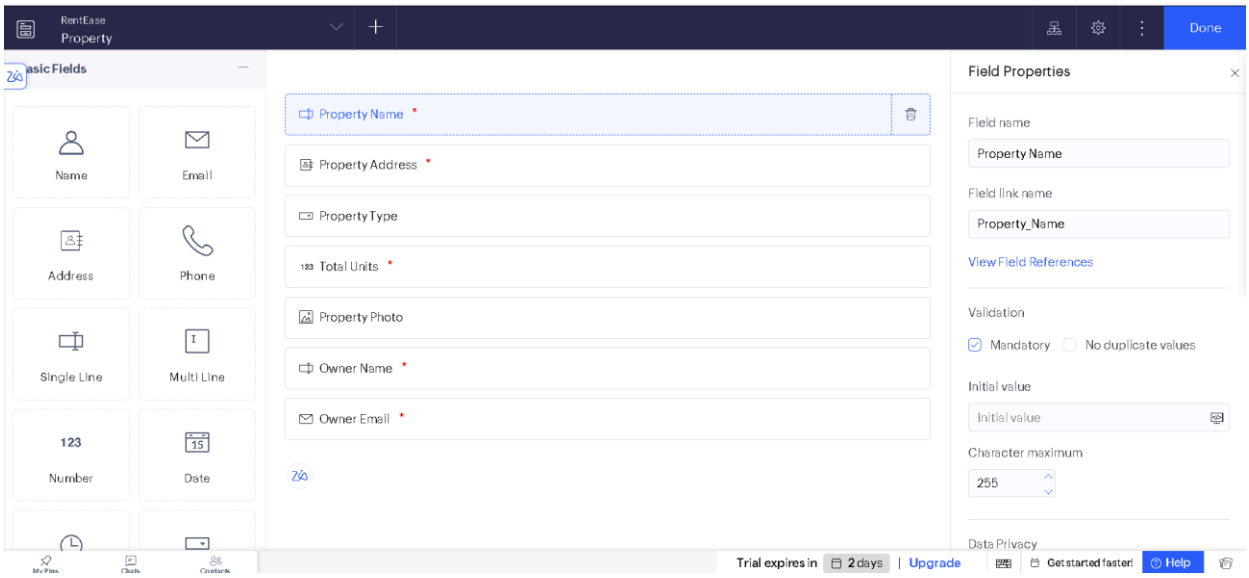

Figure 1: Property form in the Form Builder

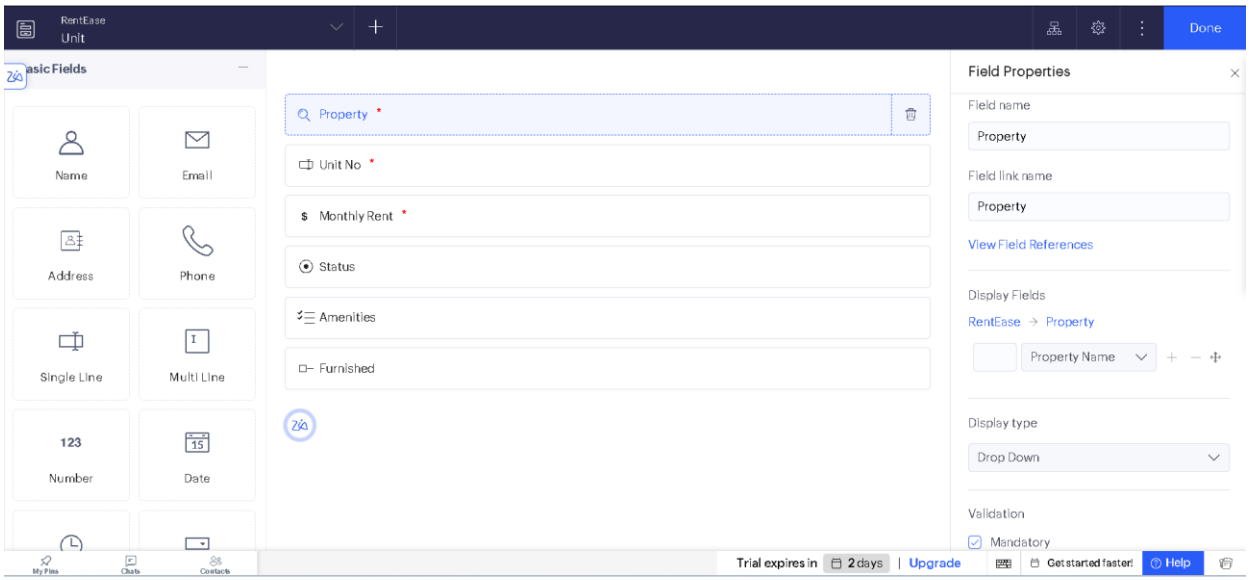

Figure 2: Lookup field configuration in the Unit form

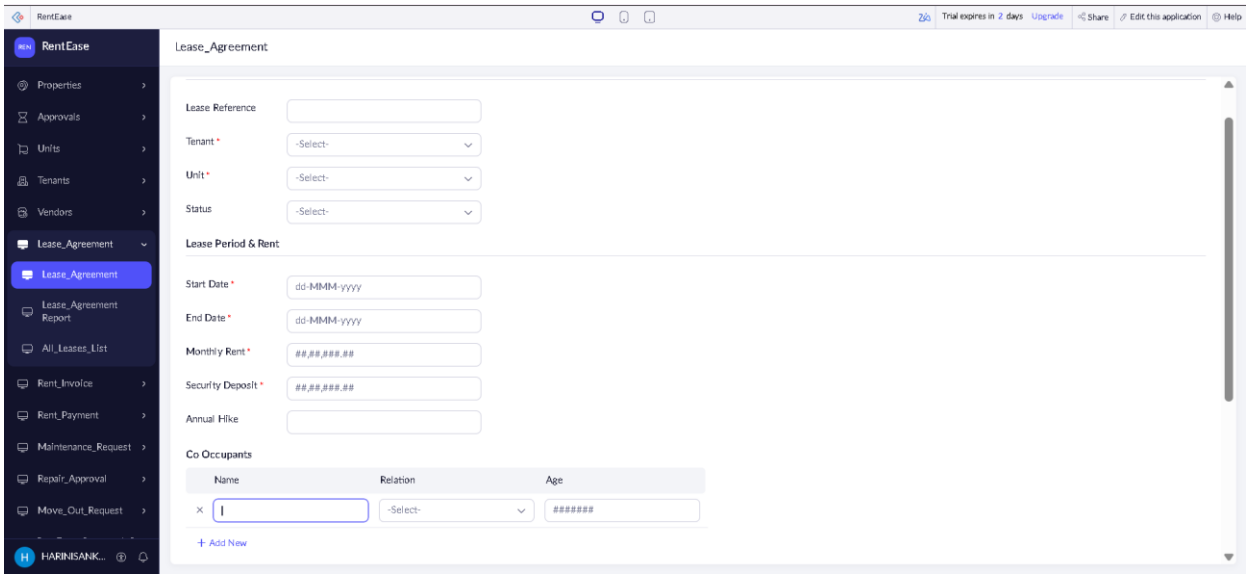

Figure 3: Lease_Agreement form

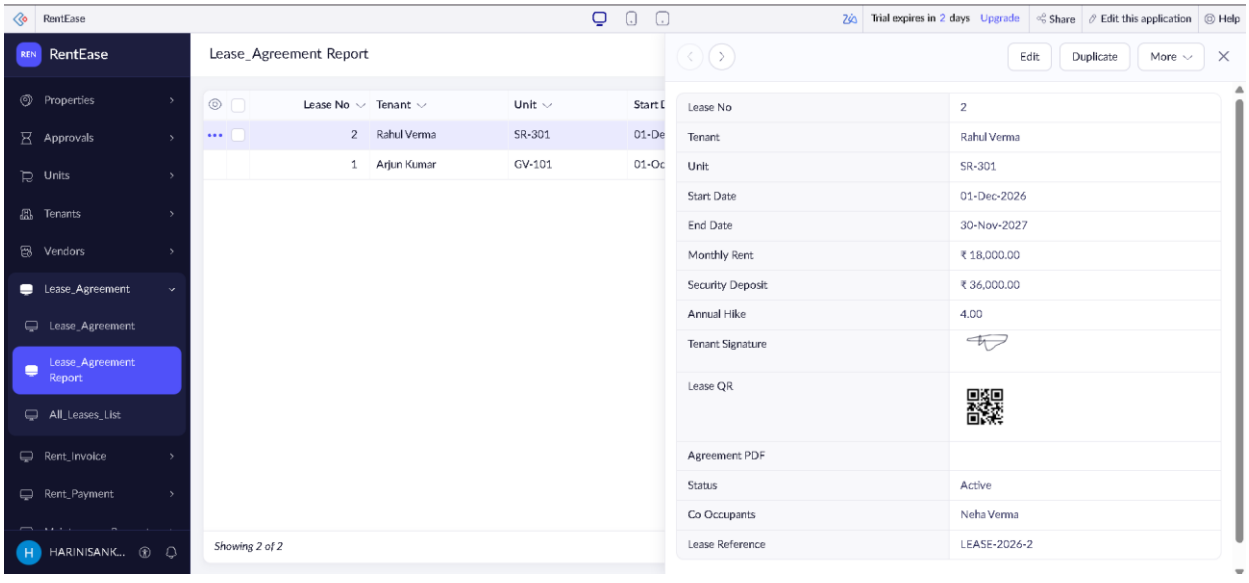

Figure 4: Lease_Agreement record with Auto Number and QR code

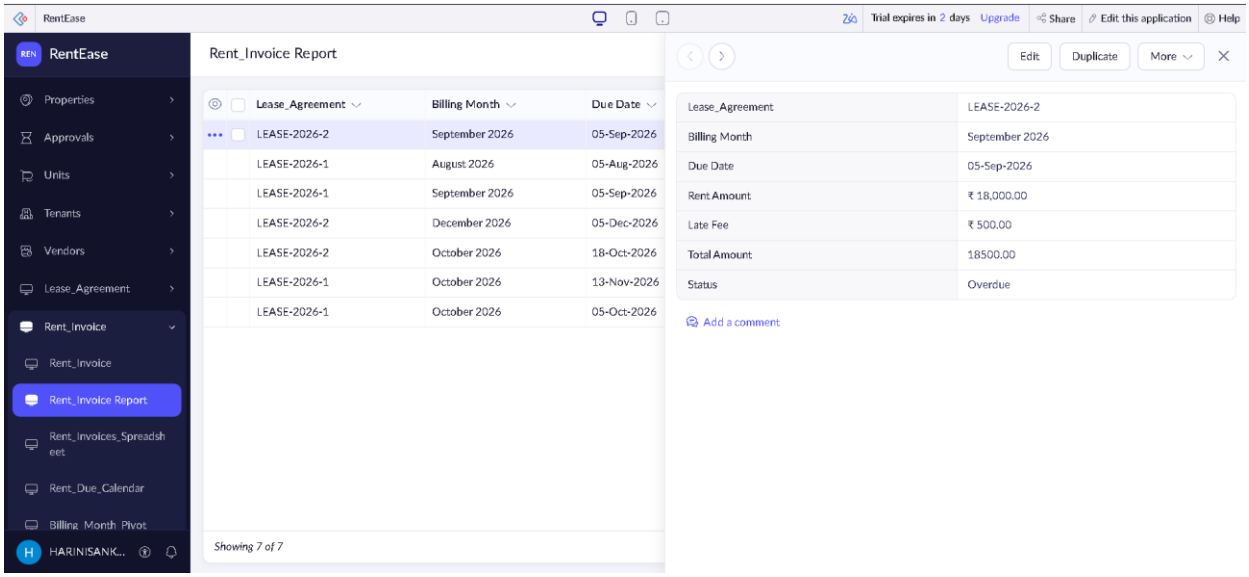

Figure 5: Rent_Invoice with the Formula field

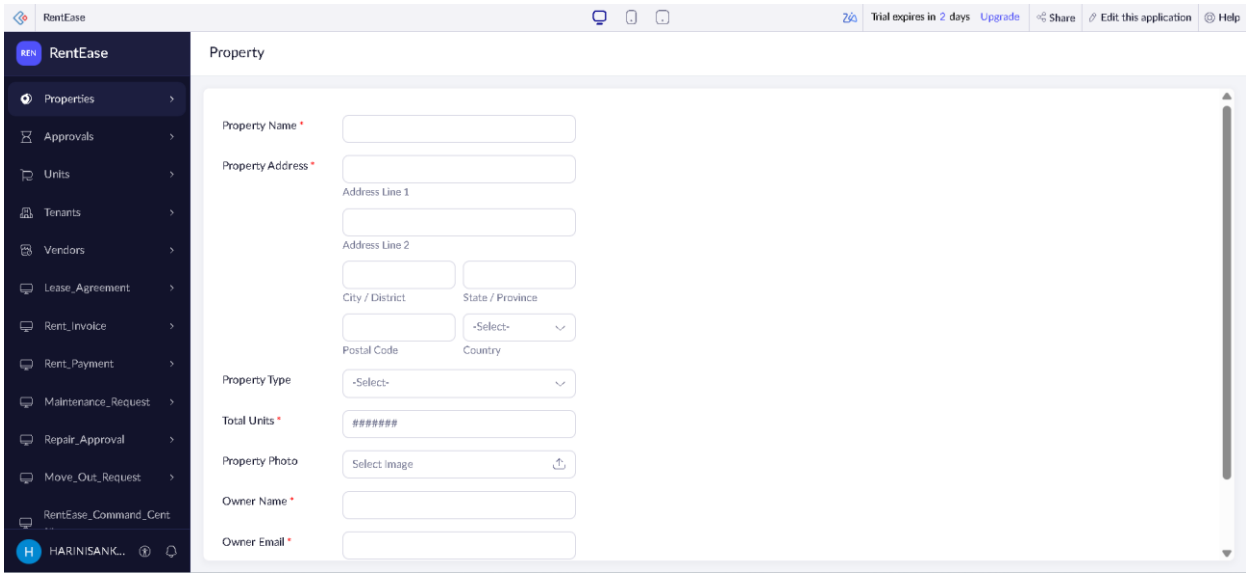

Figure 6: All forms and sample records in RentEase

7. Result

Ten forms were created in the RentEase application using the Zoho Creator Form Builder. Suitable basic and advanced field types, Lookup relationships, SubForms, an Auto Number, a Formula field, a QR code and a Signature were configured, and sample records were added and verified in the reports. The forms form the foundation for the reports, dashboard, workflows, blueprint, schedules, portal and approvals built in the following exercises.
