Dashboard in Zoho Creator

1. Aim

To design the RentEase_Dashboard page in Zoho Creator with Panel, Button and Chart elements, so that the manager can see the key figures of rent, units, leases and repairs on one screen and open the main forms and reports with one click.

2. Introduction

2.1 Pages and Dashboards in Zoho Creator

A Page in Zoho Creator is a blank canvas that is designed with a drag-and-drop page builder. Unlike a form, which collects data, or a report, which lists it, a page can combine many elements on one screen. Each element is connected to a form, a report or a function of the application. A page used for monitoring is called a dashboard. The elements used in this experiment are Panels, which show a single figure, Buttons, which open a form or a report, and Charts, which show grouped data as a graph.

2.2 The Dashboard in RentEase

In RentEase, the manager needs to know how much rent is billed and paid, how many units are occupied or vacant, which invoices are overdue and how many repairs are open. Without a dashboard, he has to open the Rent_Invoice, Unit, Lease_Agreement and Maintenance_Request reports one by one. The RentEase_Dashboard page brings these figures together and adds buttons for the most used forms and reports.

3. Objectives of the Study

- To create a page in Zoho Creator and place elements on it using the page builder.
- To show key figures of rent, units, leases and repairs as panels.
- To show rent by property and repairs by category as charts.
- To add buttons that open the main forms and reports.
- To verify the dashboard with the sample data in Access mode.

4. Procedure

1. Open the RentEase application in Edit mode, click the + (Create New Component) button and choose Page.
2. Name the page RentEase_Dashboard and open the page builder with a blank layout.
3. Drag eight Panels onto the page. For each panel select the form, the function (Sum or Count) and the criteria, and give it a label.
4. Drag four Buttons and label them Lease Agreement, Tenant, Maintenance Request and Rent Invoice Report. Set the action of each button to open the matching form or report.
5. Drag a Chart, select the Unit form, set the X-axis to Property and the Y-axis to the sum of Monthly Rent, and give it the title Sum of Monthly Rent by Property.
6. Drag a second Chart, select the Maintenance_Request form, group it by Category with the count of records, choose the pie type and give it the title Count of Maintenance Requests by Category.

7. Arrange the panels in two rows, the buttons in one row and the charts side by side, then save the page.
8. Open the page in Access mode and check every element against the sample data.
9. Take a screenshot of the page and of the settings of each element type.

5. Detailed Analysis of the Dashboard

Table 1 groups the elements placed on the RentEase_Dashboard page.

Element	Number	What the elements show
Panel	8	Single figures: rent billed, paid and late fees, number of leases, occupied and vacant units, overdue invoices and open repairs
Button	4	Quick links that open the Lease Agreement, Tenant and Maintenance Request forms and the Rent Invoice Report
Chart	2	A bar chart of monthly rent by property and a pie chart of maintenance requests by category

Table 1: Elements of the RentEase_Dashboard page

Table 2 lists the eight panels, how each figure is calculated and the value seen in the sample data.

Panel	Source and calculation	Value shown
Sum of Total Amount	Rent_Invoice: sum of Total Amount	Rs 447,500.00
Sum of Amount Paid	Sum of Amount Paid	Rs 367,000
Sum of Late Fee	Rent_Invoice: sum of Late Fee	Rs 3,000
Count of Leases	Lease_Agreement: count of records	20
Occupied	Unit: count where Status is Occupied	16
Vacant	Unit: count where Status is Vacant	4
Overdue	Rent_Invoice: count where Status is Overdue	4
Open	Maintenance_Request: count of open requests	3

Table 2: Panels of the RentEase_Dashboard page

Table 3 lists the buttons and the charts of the page.

Element	Type	Configuration
Lease Agreement	Button	Opens the Lease_Agreement form
Tenant	Button	Opens the Tenant form
Maintenance Request	Button	Opens the Maintenance_Request form
Rent Invoice Report	Button	Opens the Rent_Invoice Report
Sum of Monthly Rent by Property	Bar chart	Form: Unit; X-axis: Property; Y-axis: sum of Monthly Rent
Count of Maintenance Requests by Category	Pie chart	Form: Maintenance_Request; grouped by Category (Plumbing, Electrical, Carpentry, Painting, Appliance, Other); count of records

Table 3: Buttons and charts of the RentEase_Dashboard page

The dashboard also supports quick checks. The billed amount of Rs 447,500 against the paid amount of Rs 367,000 shows that about Rs 80,500 is still to be collected, and the sixteen occupied and four vacant units together account for the twenty leases and units in the sample data.

6. Output

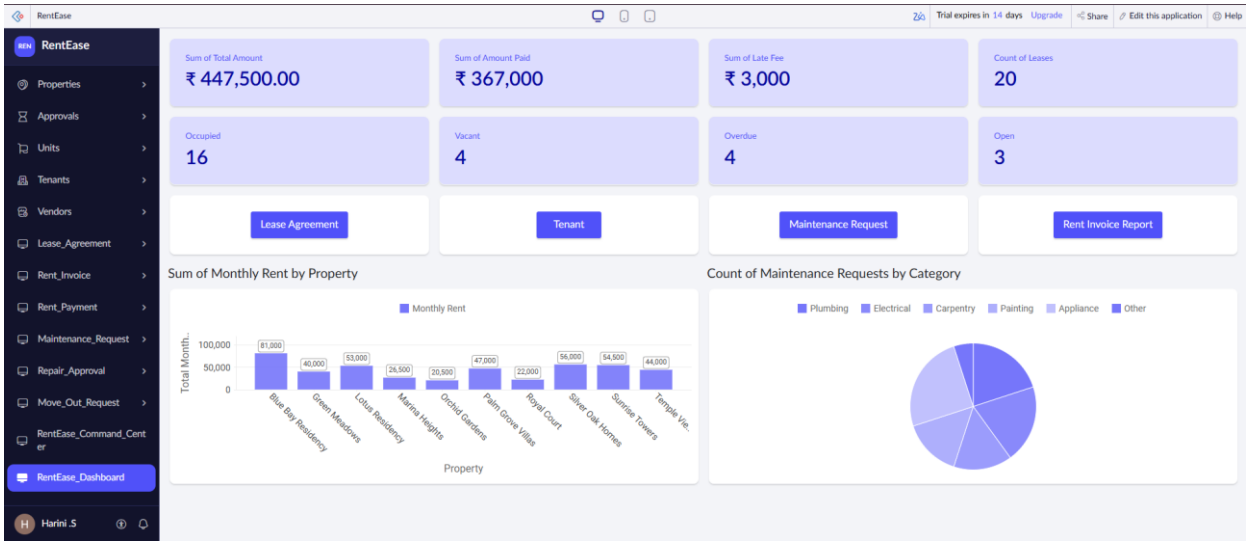

Figure 1: The completed RentEase_Dashboard page in Access mode

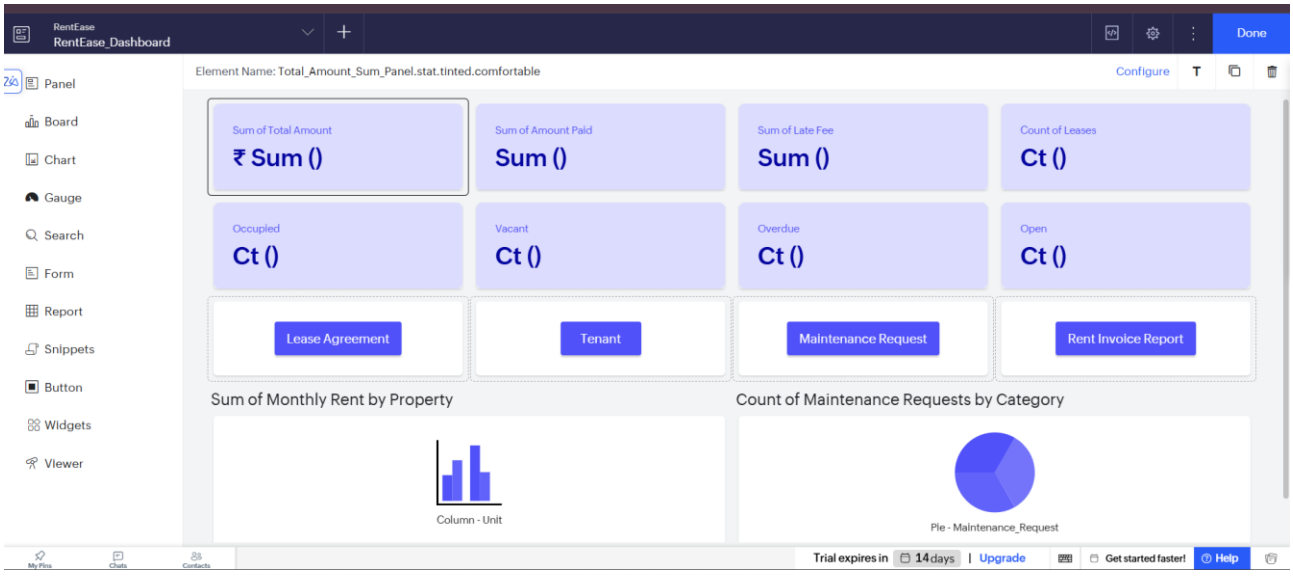

Figure 2: RentEase_Dashboard in the page builder

Figure 3: Settings of a panel

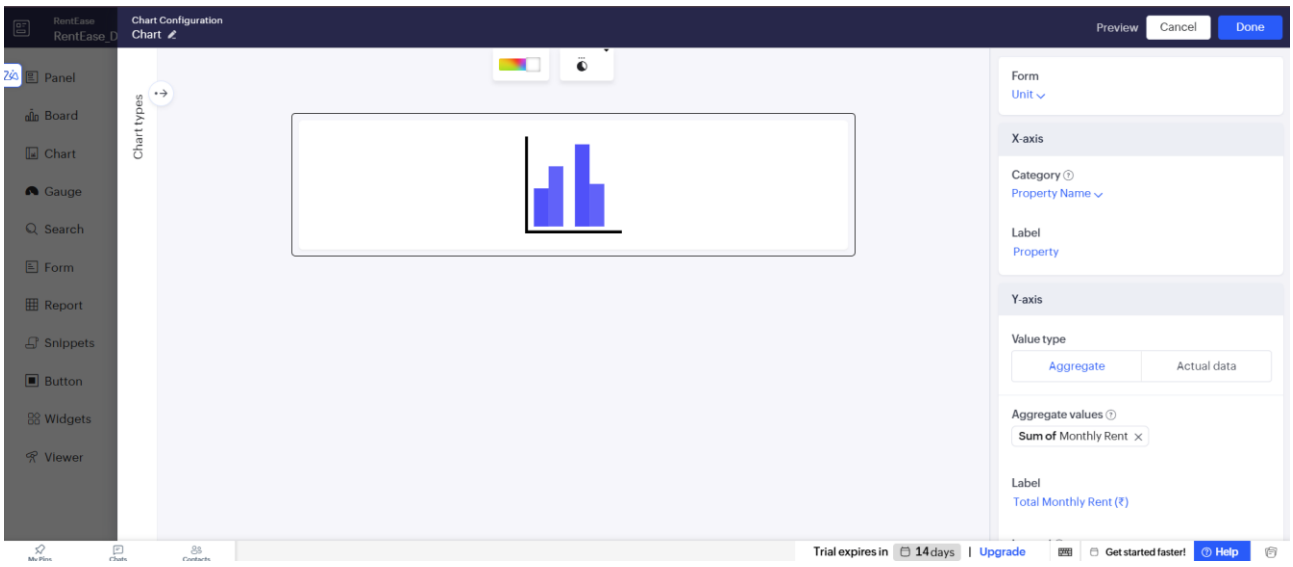

Figure 4: Settings of the bar chart

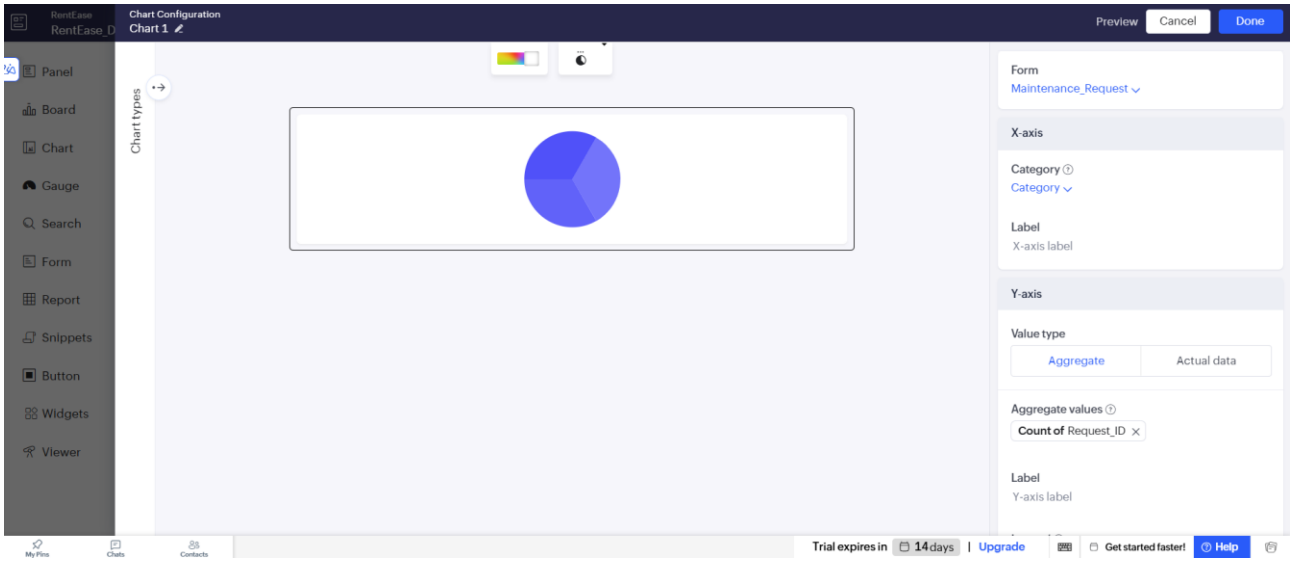

Figure 5: Settings of the pie chart

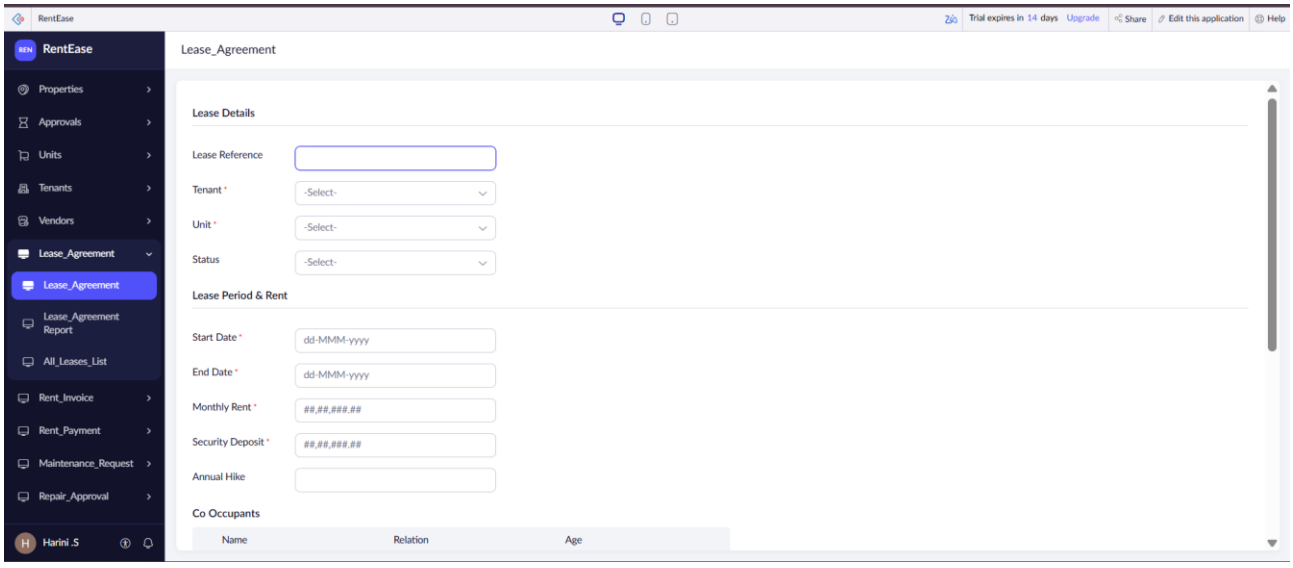

Figure 6: Settings of a button

7. Result

The RentEase_Dashboard page was created in Zoho Creator and verified with sample data in Access mode. Its panels show the billed, paid and late-fee amounts, the number of leases, the occupied and vacant units, the overdue invoices and the open repairs, its charts show rent by property and repairs by category, and its buttons open the main forms and reports. The manager can now follow the state of the rentals from a single screen.
